

ABSTRACT

The present invention provides a propofol-containing fat emulsion that can be administered with reduced vascular pain
5 without incorporating a local anesthetic such as lidocaine; and a process for producing the same. The fat emulsion comprises 0.1 to 5 w/v% of propofol, 2 to 20 w/v% of an oily component, 0.4 to 10 w/v% of an emulsifier and 0.02 to 0.3 w/v% of at least one compound selected from the group consisting of cyclodextrins,
10 cyclodextrin derivatives and pharmacologically acceptable salts thereof, and is in the form of a fat emulsion.
